# Pirate Treasure Map Instructions

Shiver me timbers! Pirate Jim buried his treasure chest and made a map of where he left it. Rather than put an x on his map, he wrote down the following reminders. The treasure is:

1. 80 yards from the waterfall,
2. 95 yards from the mermaid's grotto
3. 115 yards from the sandy beach with palm trees.

He made his map so that 1 cm = 10 yards. Use the center of the stars at each location to start your measurements. Locate the treasure on the map and make an x there.

Now that you have found the treasure, you decide to move it and bury it near the snowy peak. Write down the instructions for finding the treasure using the same three landmarks that Pirate Jim used.

\_\_\_\_\_yards from the waterfall

\_\_\_\_\_yards from the mermaid's grotto

\_\_\_\_\_yards from the sandy beach with palm trees

Now pick a different spot on your map where you want to bury the treasure. **DO NOT MARK IT!** Write down the instructions for finding the treasure using any three landmarks. Have a friend use your instructions to locate the buried treasure on the map. If that friend is not successful, one of ye be walkin' the plank!

Your instructions:
